

MATHEMATICS

At St. Mary's Academy the mathematics department weaves guided discovery into lessons at all grade levels. This approach helps boost retainment and comprehension of concepts, as we recognize that core understanding of processes will help students find success while fostering the development of problem-solving skills. Students are enrolled in a general math program in grades 7 to 9 with options opening up at the grade 10 level. In grades 11 and 12, students can select from a variety of math options including Pre-Calculus, Applied Mathematics, Essential Mathematics, Advanced Placement Calculus, Economics and Digital Media.

"What I loved about St Mary's is that the teachers cared for us. The science and math teachers were open to one-on-one help and made sure to set aside time to ensure we understood the material. I found that the teachers really cared about our success. I remember having a

class discussion about one mid-term test, our teacher listened to the student voices in order to make improvements on future assessments. She cared and respected our thoughts.
