

SCIENCE

At St. Mary's Academy, students in grades 7 to 10 general science courses cover topics in biology, chemistry, earth sciences and physics. They are general courses aimed at developing scientific literacy, lab skills, lab safety awareness and provide a foundation for studies in the senior years. In grades 11 and 12, students can select from a variety of science options including Biology, Chemistry, Advanced Placement Chemistry, Physics and Interdisciplinary Sciences.

"Though the senior years science courses can be challenging, I believe that they have well prepared me for my further endeavors in university. These courses have built friendships and developed my study habits and skills. I recommend them to anyone interested in pursuing science as a career or simply as an interest."

– Vanessa Rama '23

"As a proud graduate of the class of 2001, I am grateful for my experiences and the personal and intellectual foundation that was built at St. Mary's Academy. The nurturing environment and strong academic program afforded me the opportunity to excel and explore my

personal talents which have ultimately led to my professional success. The memories made within the walls of SMA are still very much a part of me and I will always be grateful for my experience at St. Mary's Academy."
